POT

This is documentation of POT - official toolkit for [OTServ AAC scripts](#).

PHP OTServ Toolkit

There are several reasons why POT was created:

- Just because it was needed - OTServ should have had that long time ago.
- To unify AAC scripts - there are tons of them, and you never know how to write even a single line of code to them as each of them are created different way.
- To provide reliable way of database accessing - most of people who create AAC scripts are (to be honest...) idiots - they don't know what PHP is, how to use it, they just "want to make own AAC script".
- To provide easy interface - people who write in PHP want to write in PHP, not using SQL, XML and many other languages. POT provides abstract PHP interface for data stored in database.

POT has been created for latest SVN release, it won't work with old database structure as well as with broken database - it relies on database foreign key constraints, triggers etc.

System requirements

To use POT you need [PHP](#) version at least 5.0 with [PDO extension installed](#) (so it means you will mostly need PHP 5.1, but it is possible to download PDO as external libraries for PHP 5.0.x).

What POT is

POT is a toolkit/library for accessing OTServ database from PHP. It provides PHP classes that represents OTServ database information as an objects.

What POT is not

- It is not AAC script - this is a toolkit for making them, but you can't directly run it as website. It has only programming interface.
- It is not application/system framework - you won't create website with only POT. POT has only functionality connected with OTServ database, it doesn't contain for example templates engine. You also won't be able to use it as an ordinary database connection engine - it makes use of [PDO](#) so you can use PDO by itself, POT doesn't provide any additional universal functionality. All it's classes are strictly connected with OTServ database.

What about XML?

Sorry to say, XML guys - go out. OTServ will never leave XML - it is good to store some flat parts of database there. But not for main database which requires more advanced relationship between data. However of course maybe someone would want to create DB_XML driver for POT? If you really are a masochist - you're welcome, we will be glad to contribute with you ;).

If you are interested in why XML so sux, and you with it, check out [OTFans thread](#).

How to use

This is toolkit - set of classes/methods for OTServ database. It abstracts database mechanisms for you so you can work on "physical" PHP objects. But you must know how to use them. This documentation describes some basic steps and toolkit API, but you must know PHP in order to make use of them - the best place to get some knowledge is [PHP manual](#).

Don't copy any of included examples, neither codes provided as examples - they probably won't work. Mainly it's because you have to put your database configuration into them and your script paths. But it's not enough. If you have your own `__autoload()` mechanism you won't be able to just include example codes - you would need to redefine `__autoload()` function, which PHP doesn't allow to (but you should know that very well). Example codes are examples - write your own (if you want them to work the best way for you).

Link

If you use POT in your script and want to show that you can put this image on your website:

You can use following code for that:

```
1 <a href="http://www.otserv-aac.info/pot/" >
2 
3 </a>
```

POT class preview

Here main POT class will be described in more guided way.

What it is

[POT](#) class is main class of this toolkit. You will access any other classes using this one. It creates for you instances of other classes when you call it's methods and handles class files loading.

Creating instance of POT class

To get POT object you have to use [POT::getInstance\(\)](#) static method. You should never ever create POT class instances directly! [POT::getInstance\(\)](#) will save static instance and return it globally so you won't need to re-create instances of this class. It is important, as object of this class contains another resources like database connection, or classes directory path so after creating new instance it would not contain them from previous one.

[__autoload\(\)](#) and POT classes

PHP5 provides nice [autoloading mechanism](#). POT makes use of [spl_autoload_register\(\) function](#) to bind own mechanism with it automatically. If you have your own [__autoload](#) function defined, after including POT class you have to register your function with [spl_autoload_register\(\)](#) as well.

DAO classes

Key part of this toolbox are Data Access Objects which provides abstraction layer in PHP for plain database data. You create them via main POT class using [createObject\(\) method](#).

Quick start

Quick start guide.

Putting this all together

To set POT up for using you have to create it's instance and connect to database (it will automatically bind [POT classes loading mechanism](#) to `__autoload()` function. Here is a startup code example:

```
1  <?php
2
3  /**
4   * @ignore
5   * @package examples
6   * @author Wrzasq <wrzasq@gmail.com>
7   * @copyright 2007 (C) by Wrzasq
8   * @license http://www.gnu.org/licenses/lgpl-3.0.txt GNU Lesser General Public License, Version 3
9   */
10
11 // binds your __autoload code
12 if( function_exists('__autoload') )
13 {
14     spl_autoload_register('__autoload');
15 }
16
17 // includes POT main file
18 include( './classes/OTS.php' );
19
20 // database configuration - can be simply moved to external file, eg. config.php
21 $config= array(
22     'driver' =>  POT::DB_MYSQL,
23     'host' =>    'localhost',
24     'user' =>    'wrzasq',
25     'database' => 'otserv'
26 );
27
28 // creates POT instance (or get existing one)
29 $ots= POT::getInstance();
30 $ots-> connect(null, $config;
31
32 ?>
```

Account creation

It is very simple to create account with POT. Here is example code that is self-explainable:

```
1  <?php
2
3  /**
4   * @ignore
5   * @package examples
6   * @author Wrzasq <wrzasq@gmail.com>
7   * @copyright 2007 (C) by Wrzasq
8   * @license http://www.gnu.org/licenses/lgpl-3.0.txt GNU Lesser General Public License, Version 3
```

```

9  */
10
11 // to not repeat all that stuff
12 include('quickstart.php');
13
14 // creates new OTS_Account object
15 $account= $ots->    createObject('Account');
16
17 // generates new account number
18 $number= $account->    create();
19
20 /*
21 to generate number from 111111 to 999999 use:
22 $number = $account->create(111111, 999999);
23 */
24
25 // sets account info
26 $account->    setPassword('secret');// $account->setPassword( md5('secret') );
27 $account->    setEmail('foo@example.com');
28 $account->    unblock();// remember to unblock!
29 $account->    setPACCDays(0);
30 $account->    save();
31
32 // give user his number
33 echo 'Your account number is: ',    $number
34
35 ?>

```

It is important to remember that [create\(\) method](#) sets `blocked` field of record to true by default, so for smaller projects where you, for example, wouldn't need e-mail activation unblock it after creation.

Character reading

Here comes also simple example for character search:

```

1  <?php
2
3  /**
4   * @ignore
5   * @package examples
6   * @author Wrzasq <wrzasq@gmail.com>
7   * @copyright 2007 (C) by Wrzasq
8   * @license http://www.gnu.org/licenses/lgpl-3.0.txt GNU Lesser General Public License, Version 3
9   */
10
11 // to not repeat all that stuff
12 include('quickstart.php');
13
14 // creates new OTS_Player object
15 $player= $ots->    createObject('Player');
16
17 // loads player
18 $player->    find('Wrzasq');
19
20 // checks if player exists
21 if( $player->    isLoading() )
22 {
23     // prints character info

```

```

24     echo 'Player \'' . $player> getName() . '\' has ' . $player> getLevel() . ' level.', "\n"
25
26     // example of associated objects retrieving
27     echo 'Player \'' . $player> getName() . '\' is member of ' . $player> getGroup()-> getName() . '
group.', "\n"
28 }
29 else
30 {
31     echo 'Player does not exists.', "\n"
32 }
33
34 ?>

```

Objects listings

There are also classes for entire sets of records. For each of row classes there is list class. Throught list object you can read single objects and/or delete them from database. Also you can set limitation (for example for pagination). All list classes implements Countable and Iterator interfaces:

```

1  <?php
2
3  /**
4   * @ignore
5   * @package examples
6   * @author Wrzasq <wrzasq@gmail.com>
7   * @copyright 2007 (C) by Wrzasq
8   * @license http://www.gnu.org/licenses/lgpl-3.0.txt GNU Lesser General Public License, Version 3
9   */
10
11 // to not repeat all that stuff
12 include('quickstart.php');
13
14 // creates new OTS_Player object
15 $players= $ots> createObject('Players_List');
16
17 // count of all players - Countable interface implemented
18 echo 'There are ' . count( $players) . ' players in our database.', "\n"
19
20 // sets limitation
21 $players> setLimit(10);
22 $players> setOffset(2);
23
24 // iterates through selected players
25 foreach($playersas $index=> $player)
26 {
27     // each returned item is instance of OTS_Player class
28     echo (2 + $index) . ': ' . $player> getName(), "\n"
29 }
30
31 ?>

```

Account number hack

Example code of how to use prepared account number instead of random.

Walkaround

POT always generates random account number - [it is the way your script should work](#). It is done that way with premeditation. However you can walk around it with simple code:

```
1  <?php
2
3  /**
4   * @ignore
5   * @package examples
6   * @author Wrzasq <wrzasq@gmail.com>
7   * @copyright 2007 (C) by Wrzasq
8   * @license http://www.gnu.org/licenses/lgpl-3.0.txt GNU Lesser General Public License, Version 3
9   */
10
11 // to not repeat all that stuff
12 include('quickstart.php');
13
14 // your non-random number
15 $number= 123456;
16
17 // creates new OTS_Account object
18 $account= $ots->createObject('Account');
19 $account->load($number);
20
21 // number is busy
22 if( $account->isLoaded() )
23 {
24     echo 'Account number ', $number, 'is used.', "\n" ;
25 }
26 // it is not
27 else
28 {
29     // generate number from exactly $number - $number range
30     $number= $account->create($number, $number);
31     echo 'Your account number is: ', $number, "\n" ;
32 }
33
34 ?>
```

Server online status

This tutorial will describe how to test server status with POT.

Such a simple way

[POT class](#) contains [serverStatus\(\) method](#) which sends 'info' packet to OTS and handles results. It returns object of class [OTS_InfoRespond](#) which provides access methods for all OTServ respond info. It will return false if server is offline. Here is a simple example of this method usage:

```
1  <?php
2
3  /**
4   * @ignore
5   * @package examples
6   * @author Wrzasq <wrzasq@gmail.com>
7   * @copyright 2007 (C) by Wrzasq
8   * @license http://www.gnu.org/licenses/lgpl-3.0.txt GNU Lesser General Public License, Version 3
9   */
10
11 // to not repeat all that stuff
12 include('quickstart.php');
13
14 // server and port
15 $server= '127.0.0.1';
16 $port= 7171;
17
18 // queries server of status info
19 $status= $ots-> serverStatus($server, $port);
20
21 // offline
22 if(!$status)
23 {
24     echo 'Server ', $server, ' is offline.', "\n" ;
25 }
26 // displays various info
27 else
28 {
29     echo 'Server name: ', $status-> getName(), "\n" ;
30     echo 'Server owner: ', $status-> getOwner(), "\n" ;
31     echo 'Players online: ', $status-> getOnlinePlayers(), "\n" ;
32     echo 'Maximum allowed number of players: ', $status-> getMaxPlayers(), "\n" ;
33     echo 'Required client version: ', $status-> getClientVersion(), "\n" ;
34     echo 'All monsters: ', $status-> getMonstersCount(), "\n" ;
35     echo 'Server message: ', $status-> getMOTD(), "\n" ;
36 }
37
38 ?>
```

DOM way

In case you would want to use this method for some non-SVN server which contains custom fields in respond packet you can still use it. OTS_InfoRespond class is child of DOMDocument class and doesn't overwrite it's

interface neither behaviour in any way. Returned object is standard DOM document so you can work with it in standard DOM-way.

PHP 5.0

Some things that you should know if you use POT under PHP 5.0.x.

PHP 5.0

PHP5 was a huge step in PHP history. It is completely other language than PHP4 (and older versions). POT is written for PHP5 but currently you most PHP5 installations are done with PHP 5.1 and higher versions. PHP 5.0 differs from next versions in few details (or even not details, but huge changes, but those mostly doesn't affect POT). There are some important things you should know if you use POT with PHP 5.0.

PDO

POT requires [PDO extension](#). It is bundled with PHP since 5.1 version. If you use PHP 5.0 you still can install PDO, but you need to do that using [PECL extensions](#). Detailed information about how to do that are in [PHP manual PDO page](#).

Sub package "compat"

If you use PHP 5.0 you should include special [compatibility assurance](#) library. POT uses some mechanisms that exists since PHP 5.1 like [Countable interface](#). It doesn't disallow you using POT with PHP 5.0. Compatibility library will create unexisting interfaces, classes, functions, constants etc. However keep in mind that you won't be able to use PHP 5.1 and newer language mechanisms as it is not possible to redefine PHP behaviour. Here is an example:

```
1  <?php
2
3  /**
4   * @ignore
5   * @package examples
6   * @author Wrzasq <wrzasq@gmail.com>
7   * @copyright 2007 (C) by Wrzasq
8   * @license http://www.gnu.org/licenses/lgpl-3.0.txt GNU Lesser General Public License, Version 3
9   */
10
11 // do that before any POT operations!
12 include('compat.php');
13
14 // to not repeat all that stuff
15 include('quickstart.php');
16
17 // STEP 1: no error here - even though we loaded class that implements Countable interface which does not
18 // exists in PHP 5.0 SPL library, because 'compat' library defines it.
19 $list= POT::getInstance()-> createObject('Players_List');
20
21 // STEP 2: we can do that in every version - count() is in fact just a public method
22 echo $list-> count();
23
24 // STEP 3: it won't work correctly in PHP 5.0 - PHP won't call internal count() method of object, will print trivial
25 // count() evaluation result on object
26 echo count( $list);
```

25
26 ?>

Nothin new

Compatibility library make you sure, that POT scripts won't cause FATAL errors if you run them on older versions of PHP. However it doesn't introduce any new mechanisms so you won't find anything new in this package. It is safe to include compat.php file even if you work with PHP version 5.1 or newer, but there is no point in doing that.

__autoload()

POT registers own __autoload() handler with [spl_autoload_register\(\)](#). This function exists since PHP 5.1.2. Compatibility library defines this function as definer of another function - ordinary __autoload(). If you have own __autoload() function, compat's spl_autoload_register() won't redefine __autoload() to avoid E_FATAL. You then need to bind [POT::loadClass\(\) method](#) to your __autoload() function manually.

What about older PHP versions?

No way. POT was written using new PHP5 object engine - you cant use it with PHP4 and older versions of PHP, PHP/FI.

Package POT Procedural Elements

Package POT Classes

Class IOTS_DAO

[line 21]

OTserv database object.

OTserv database object.

This interface indicates that class is a OTServ DAO class.

- **Package** POT
- **Version** 0.0.1

Constructor *void* function IOTS_DAO::__construct(\$db) *[line 28]*

Function Parameters:

- [*IOTS_DB*](#) **\$db** Database connection object.

DAO objects must be initialized with a database.

DAO objects must be initialized with a database.

- **Version** 0.0.1
- **Access** public

Class IOTS_DB

[line 21]

OTServ database handler interface.

OTServ database handler interface.

This interface specifies routines requires by DAO classes.

- **Package** POT
- **Version** 0.0.1

Constructor *void* function IOTS_DB::__construct(\$params) [line 28]

Function Parameters:

- *array* **\$params** Connection configuration.

Connection parameters.

Connection parameters.

- **Version** 0.0.1
- **Access** public

string function IOTS_DB::fieldName(\$name) [line 36]

Function Parameters:

- *string* **\$name** Field name.

Query-quoted field name.

Query-quoted field name.

- **Version** 0.0.1
- **Access** public

int function IOTS_DB::lastInsertId() [*line 63*]

ID of last created record.

ID of last created record.

- **Version** 0.0.1
- **Access** public

string function IOTS_DB::limit([\$limit = false], [\$offset = false]) [*line 71*]

Function Parameters:

- *int|bool* **\$limit** Limit of rows to be affected by query (false if no limit).
- *int|bool* **\$offset** Number of rows to be skipped before applying query effects (false if no offset).

LIMIT/OFFSET clause for queries.

LIMIT/OFFSET clause for queries.

- **Version** 0.0.1
- **Access** public

mixed function IOTS_DB::SQLquery(\$query) [*line 57*]

Function Parameters:

- *string* **\$query** Database query.

Evaluates query.

Evaluates query.

- **Version** 0.0.1
- **Access** public

string function IOTS_DB::SQLquote(\$value) [*line 50*]

Function Parameters:

- *string* **\$value** Value to be quoted to be suitable for database query.

Query-quoted string value.

Query-quoted string value.

- **Version** 0.0.1
- **Access** public

string function IOTS_DB::tableName(\$name) [*line 43*]

Function Parameters:

- *string* **\$name** Table name.

Query-quoted table name.

Query-quoted table name.

- **Version** 0.0.1
- **Access** public

Class OTS_Account

[line 21]

OTServ account abstraction.

OTServ account abstraction.

- **Package** POT
- **Version** 0.0.1
- **Version** 0.0.2

Constructor *void* function OTS_Account::__construct(\$db) [line 42]

Function Parameters:

- [*IOTS_DB*](#) \$db Database connection object.

Sets database connection handler.

Sets database connection handler.

- **Version** 0.0.1
- **Access** public

void function OTS_Account::block() [*line 263*]

Blocks account.

Blocks account.

- **Version** 0.0.1
- **Access** public

int function OTS_Account::create([\$min = 1], [\$max = 9999999]) [*line 62*]

account.php

```

1      <?php
2
3      /**
4       * @ignore
5       * @package examples
6       * @author Wrzasq <wrzasq@gmail.com>
7       * @copyright 2007 (C) by Wrzasq
8       * @license http://www.gnu.org/licenses/lgpl-3.0.txt GNU Lesser General Public License, Version 3
9       */
10
11     // to not repeat all that stuff
12     include('quickstart.php');
13
14     // creates new OTS_Account object
15     $account = $ots->createObject('Account');
16
17     // generates new account number
18     $number = $account->create();
19
20     /*
21     to generate number from 111111 to 999999 use:
22     $number = $account->create(111111, 999999);
23     */
24
25     // sets account info
26     $account->setPassword('secret'); // $account->setPassword( md5('secret') );
27     $account->setEMail('foo@example.com');
28     $account->unblock(); // remember to unblock!
29     $account->setPACCDays(0);
30     $account->save();
31
32     // give user his number
33     echo 'Your account number is: ', $number;
34
35     ?>

```

Function Parameters:

- *int* **\$min** Minimum number.
- *int* **\$max** Maximum number.

Creates new account.

Creates new account.

Create new account in given range (1 - 99999999 by default).

Remember! This method sets blocked flag to true after account creation!

- **Version** 0.0.1
- **Throws** Exception When there are no free account numbers.
- **Access** public
- **Example**

void function OTS_Account::find(\$email) [*line 127*]

Function Parameters:

- *string* **\$email** Account's e-mail address.

Loads account by it's e-mail address.

Loads account by it's e-mail address.

- **Version** 0.0.2
- **Version** 0.0.1
- **Since** 0.0.2
- **Access** public

string/bool function OTS_Account::getEmail() [*line 215*]

E-mail address.

E-mail address.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Account::getId() [*line 173*]

Account number.

Account number.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Account::getPACCDays() [*line 273*]

PACC days.

PACC days.

- **Version** 0.0.1
- **Access** public

string/bool function OTS_Account::getPassword() [*line 189*]

Account's password.

Account's password.

- **Version** 0.0.1
- **Access** public

array/bool function OTS_Account::getPlayers() [*line 299*]

List of characters on account.

List of characters on account.

- **Version** 0.0.1
- **Access** public

bool/null function OTS_Account::isBlocked() [*line 241*]

Checks if account is blocked.

Checks if account is blocked.

- **Version** 0.0.1
- **Access** public

bool function OTS_Account::isLoaded() [*line 144*]

Checks if object is loaded.

Checks if object is loaded.

- **Version** 0.0.1

- **Access** public

void function OTS_Account::load(\$id) [*line 114*]

Function Parameters:

- *int* **\$id** Account number.

Loads account with given number.

Loads account with given number.

- **Version** 0.0.1
- **Access** public

bool function OTS_Account::save() [*line 154*]

Updates account in database.

Updates account in database.

- **Version** 0.0.1
- **Access** public

void function OTS_Account::setEMail(\$email) [*line 231*]

Function Parameters:

- *string* **\$email** E-mail address.

Sets account's email.

Sets account's email.

- **Version** 0.0.1
- **Access** public

void function OTS_Account::setPACCDays(\$premdays, \$pacc) [*line 289*]

Function Parameters:

- *int* **\$pacc** PACC days.
- **\$premdays**

Sets PACC days count.

Sets PACC days count.

- **Version** 0.0.1
- **Access** public

void function OTS_Account::setPassword(\$password) [*line 205*]

Function Parameters:

- *string* **\$password** Password.

Sets account's password.

Sets account's password.

- **Version** 0.0.1

- **Access** public

void function OTS_Account::unblock() [line 255]

Unblocks account.

Unblocks account.

- **Version** 0.0.1
- **Access** public

Class OTS_Accounts_List

[line 19]

List of accounts.

List of accounts.

- **Package** POT
- **Version** 0.0.1

Constructor void function OTS_Accounts_List::__construct(\$db) [line 54]

Function Parameters:

- [IOTS_DB](#) **\$db** Database connection object.

Sets database connection handler.

Sets database connection handler.

- **Version** 0.0.1
- **Access** public

int function OTS_Accounts_List::count() [*line 166*]

Returns number of accounts on list in current criterium.

Returns number of accounts on list in current criterium.

- **Version** 0.0.1
- **Access** public

OTS_Account function OTS_Accounts_List::current() [*line 116*]

Returns current row.

Returns current row.

- **Version** 0.0.1
- **Access** public

bool function OTS_Accounts_List::deleteAccount(\$account) [*line 99*]

Function Parameters:

- [*OTS Account*](#) **\$account** Account to be deleted.

Deletes account.

Deletes account.

- **Version** 0.0.1
- **Access** public

mixed function OTS_Accounts_List::key() [*line 138*]

Current cursor position.

Current cursor position.

- **Version** 0.0.1
- **Access** public

void function OTS_Accounts_List::next() [*line 128*]

Moves to next row.

Moves to next row.

- **Version** 0.0.1
- **Access** public

void function OTS_Accounts_List::rewind() [*line 156*]

Select accounts from database.

Select accounts from database.

- **Version** 0.0.1

- **Access** public

void function OTS_Accounts_List::setLimit([\$limit = false]) [*line 64*]

Function Parameters:

- *int|bool* **\$limit** Limit for SELECT (false to reset).

Sets LIMIT.

Sets LIMIT.

- **Version** 0.0.1
- **Access** public

void function OTS_Accounts_List::setOffset([\$offset = false]) [*line 81*]

Function Parameters:

- *int|bool* **\$offset** Offset for SELECT (false to reset).

Sets OFFSET.

Sets OFFSET.

- **Version** 0.0.1
- **Access** public

bool function OTS_Accounts_List::valid() [*line 148*]

Checks if there are any rows left.

Checks if there are any rows left.

- **Version** 0.0.1
- **Access** public

Class OTS_DB_MySQL

[line 19]

MySQL connection interface.
MySQL connection interface.

- **Package** POT
- **Version** 0.0.1

Constructor *void* function OTS_DB_MySQL::__construct(\$params) [line 46]

Function Parameters:

- *array* **\$params** Connection parameters.

Creates database connection.

Creates database connection.

Connects to MySQL database on given arguments.

List of parameters for this drivers:

- *host* - database server.
- *port* - port (optional, also it is possible to use host:port in *host* parameter).
- *database* - database name.
- *user* - user login.
- *password* - user password.

- **Version** 0.0.1
- **See** [POT::connect\(\)](#)
- **Access** public

string function OTS_DB_MySQL::fieldName(\$name) [*line 101*]

Function Parameters:

- *string* **\$name** Field name.

Query-quoted field name.

Query-quoted field name.

- **Version** 0.0.1
- **Access** public

string function OTS_DB_MySQL::limit([\$limit = false], [\$offset = false]) [*line 152*]

Function Parameters:

- *int|bool* **\$limit** Limit of rows to be affected by query (false if no limit).
- *int|bool* **\$offset** Number of rows to be skipped before applying query effects (false if no offset).

LIMIT/OFFSET clause for queries.

LIMIT/OFFSET clause for queries.

- **Version** 0.0.1
- **Access** public

PDOStatement|bool function OTS_DB_MySQL::SQLquery(\$query) [*line 140*]

Function Parameters:

- *string* **\$query** SQL query.

IOTS_DB method.

IOTS_DB method.

Overwrites PDO method.

- **Version** 0.0.1
- **Access** public

string function OTS_DB_MySQL::SQLquote(\$string) [*line 126*]

Function Parameters:

- *string* **\$string** String to be quoted.

IOTS_DB method.

IOTS_DB method.

Overwrites PDO method - we won't use quoting againsts other values.

- **Version** 0.0.1
- **Access** public

string function OTS_DB_MySQL::tableName(\$name) [*line 112*]

Function Parameters:

- *string* **\$name** Table name.

Query-quoted table name.

Query-quoted table name.

- **Version** 0.0.1
- **Access** public

Class OTS_DB_SQLite

[*line 19*]

SQLite connection interface.

SQLite connection interface.

- **Package** POT
- **Version** 0.0.1

Constructor *void* function OTS_DB_SQLite::__construct(\$params) [*line 42*]

Function Parameters:

- *array* **\$params** Connection parameters.

Creates database connection.

Creates database connection.

Connects to SQLite database on given arguments.

List of parameters for this drivers:

- *database* - database name.

- **Version** 0.0.1
- **See** [POT::connect\(\)](#)
- **Access** public

string function OTS_DB_SQLite::fieldName(\$name) [*line 64*]

Function Parameters:

- *string* **\$name** Field name.

Query-quoted field name.

Query-quoted field name.

- **Version** 0.0.1
- **Access** public

string function OTS_DB_SQLite::limit([\$limit = false], [\$offset = false]) [*line 128*]

Function Parameters:

- *int|bool* **\$limit** Limit of rows to be affected by query (false if no limit).
- *int|bool* **\$offset** Number of rows to be skipped before applying query effects (false if no offset).

LIMIT/OFFSET clause for queries.

LIMIT/OFFSET clause for queries.

- **Version** 0.0.1
- **Access** public

bool function OTS_DB_SQLite::regexp(\$name, \$content) [*line 88*]

Function Parameters:

- *string* **\$name** Regular expression to test.
- *string* **\$content** String to test.

REGEXP operator for SQLite

REGEXP operator for SQLite

- **Version** 0.0.1
- **Access** public

PDOStatement|bool function OTS_DB_SQLite::SQLquery(\$query) [*line 116*]

Function Parameters:

- *string* **\$query** SQL query.

IOTS_DB method.

IOTS_DB method.

Overwrites PDO method.

- **Version** 0.0.1
- **Access** public

string function OTS_DB_SQLite::SQLquote(\$string) [*line 102*]

Function Parameters:

- *string* **\$string** String to be quoted.

IOTS_DB method.

IOTS_DB method.

Overwrites PDO method - we won't use quoting against other values.

- **Version** 0.0.1
- **Access** public

string function OTS_DB_SQLite::tableName(\$name) [*line 75*]

Function Parameters:

- *string* **\$name** Table name.

Query-quoted table name.

Query-quoted table name.

- **Version** 0.0.1
- **Access** public

Class OTS_Group

[line 19]

OTServ user group abstraction.

OTServ user group abstraction.

- **Package** POT
- **Version** 0.0.1

Constructor *void* function OTS_Group::__construct(\$db) [line 40]

Function Parameters:

- [*IOTS_DB*](#) \$db Database connection object.

Sets database connection handler.

Sets database connection handler.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Group::getAccess() [line 160]

Access level.

Access level.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Group::getFlags() [*line 134*]

Rights flags.

Rights flags.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Group::getId() [*line 92*]

Group ID.

Group ID.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Group::getMaxDepotItems() [*line 186*]

Maximum count of items in depot.

Maximum count of items in depot.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Group::getMaxVIPList() [*line 212*]

Maximum count of players in VIP list.

Maximum count of players in VIP list.

- **Version** 0.0.1
- **Access** public

string/bool function OTS_Group::getName() [*line 108*]

Group name.

Group name.

- **Version** 0.0.1
- **Access** public

array/bool function OTS_Group::getPlayers() [*line 238*]

List of characters in given group.

List of characters in given group.

- **Version** 0.0.1
- **Access** public

bool function OTS_Group::isLoaded() [*line 61*]

Checks if object is loaded.

Checks if object is loaded.

- **Version** 0.0.1
- **Access** public

void function OTS_Group::load(\$id) [line 50]

Function Parameters:

- *int* **\$id** Group number.

Loads group with given id.

Loads group with given id.

- **Version** 0.0.1
- **Access** public

void function OTS_Group::save() [line 69]

Saves account in database.

Saves account in database.

- **Version** 0.0.1
- **Access** public

void function OTS_Group::setAccess(\$access) [line 176]

Function Parameters:

- *int* **\$access** Access level.

Sets access level.

Sets access level.

- **Version** 0.0.1
- **Access** public

void function OTS_Group::setFlags(\$flags) [line 150]

Function Parameters:

- *int* **\$flags** Flags.

Sets rights flags.

Sets rights flags.

- **Version** 0.0.1
- **Access** public

void function OTS_Group::setMaxDepotItems(\$maxdepotitems) [line 202]

Function Parameters:

- *int* **\$maxdepotitems** Maximum value.

Sets maximum count of items in depot.

Sets maximum count of items in depot.

- **Version** 0.0.1
- **Access** public

void function OTS_Group::setMaxVIPList(\$maxviplist, \$maxdepotitems) [line 228]

Function Parameters:

- *int* **\$maxdepotitems** Maximum value.
- **\$maxviplist**

Sets maximum count of players in VIP list.

Sets maximum count of players in VIP list.

- **Version** 0.0.1
- **Access** public

void function OTS_Group::setName(\$name) [line 124]

Function Parameters:

- *string* **\$name** Name.

Sets group's name.

Sets group's name.

- **Version** 0.0.1
- **Access** public

Class OTS_Groups_List

[line 19]

List of groups.

List of groups.

- **Package** POT
- **Version** 0.0.1

Constructor *void* function OTS_Groups_List::__construct(\$db) [line 54]

Function Parameters:

- [*IOTS_DB*](#) \$db Database connection object.

Sets database connection handler.

Sets database connection handler.

- **Version** 0.0.1
- **Access** public

int function OTS_Groups_List::count() [line 166]

Returns number of groups on list in current criterium.

Returns number of groups on list in current criterium.

- **Version** 0.0.1
- **Access** public

OTS_Group function OTS_Groups_List::current() [*line 116*]

Returns current row.

Returns current row.

- **Version** 0.0.1
- **Access** public

bool function OTS_Groups_List::deleteGroup(\$group) [*line 99*]

Function Parameters:

- [*OTS_Group*](#) **\$group** Group to be deleted.

Deletes group.

Deletes group.

- **Version** 0.0.1
- **Access** public

mixed function OTS_Groups_List::key() [*line 138*]

Current cursor position.

Current cursor position.

- **Version** 0.0.1
- **Access** public

void function OTS_Groups_List::next() [line 128]

Moves to next row.

Moves to next row.

- **Version** 0.0.1
- **Access** public

void function OTS_Groups_List::rewind() [line 156]

Select groups from database.

Select groups from database.

- **Version** 0.0.1
- **Access** public

void function OTS_Groups_List::setLimit([\$limit = false]) [line 64]

Function Parameters:

- *int|bool* **\$limit** Limit for SELECT (false to reset).

Sets LIMIT.

Sets LIMIT.

- **Version** 0.0.1
- **Access** public

void function OTS_Groups_List::setOffset([\$offset = false]) [*line 81*]

Function Parameters:

- *int|bool* **\$offset** Offset for SELECT (false to reset).

Sets OFFSET.

Sets OFFSET.

- **Version** 0.0.1
- **Access** public

bool function OTS_Groups_List::valid() [*line 148*]

Checks if there are any rows left.

Checks if there are any rows left.

- **Version** 0.0.1
- **Access** public

Class OTS_InfoRespond

[*line 22*]

Wrapper for 'info' respond's DOMDocument.

Wrapper for 'info' respond's DOMDocument.

Note: as this class extends DOMDocument class and contains exactly respond XML tree you can work on it as on normal DOM tree.

- **Package** POT
- **Version** 0.0.2
- **Since** 0.0.2

string function OTS_InfoRespond::getClientVersion() [*line 121*]

Returns dedicated version of client.

Returns dedicated version of client.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

string function OTS_InfoRespond::getEmail() [*line 141*]

Returns owner e-mail.

Returns owner e-mail.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

string function OTS_InfoRespond::getIP() [*line 49*]

Returns server IP.

Returns server IP.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

string function OTS_InfoRespond::getLocation() [*line 79*]

Returns server location.

Returns server location.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

string function OTS_InfoRespond::getMapAuthor() [*line 202*]

Returns map author.

Returns map author.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

int function OTS_InfoRespond::getMapHeight() [*line 222*]

Returns map height.

Returns map height.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

string function OTS_InfoRespond::getMapName() [*line 191*]

Returns map name.

Returns map name.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

int function OTS_InfoRespond::getMapWidth() [*line 212*]

Returns map width.

Returns map width.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

int function OTS_InfoRespond::getMaxPlayers() [*line 161*]

Returns maximum amount of players online.

Returns maximum amount of players online.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

int function OTS_InfoRespond::getMonstersCount() [*line 181*]

Returns number of all monsters on map.

Returns number of all monsters on map.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

string function OTS_InfoRespond::getMOTD() [*line 232*]

Returns server's Message Of The Day

Returns server's Message Of The Day

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

string function OTS_InfoRespond::getName() [*line 59*]

Returns server name.

Returns server name.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

int function OTS_InfoRespond::getOnlinePlayers() [*line 151*]

Returns current amount of players online.

Returns current amount of players online.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

string function OTS_InfoRespond::getOwner() [*line 131*]

Returns owner name.

Returns owner name.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

int function OTS_InfoRespond::getPlayersPeak() [*line 171*]

Returns record of online players.

Returns record of online players.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

int function OTS_InfoRespond::getPort() [*line 69*]

Returns server port.

Returns server port.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

string function OTS_InfoRespond::getServer() [*line 101*]

Returns server attribute.

Returns server attribute.

I have no idea what the hell is it representing :P.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

string function OTS_InfoRespond::getServerVersion() [*line 111*]

Returns server version.

Returns server version.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

string function OTS_InfoRespond::getTSPQVersion() [*line 29*]

Returns version of root element.

Returns version of root element.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

int function OTS_InfoRespond::getUptime() [*line 39*]

Returns server uptime.

Returns server uptime.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

string function OTS_InfoRespond::getURL() [*line 89*]

Returns server website.

Returns server website.

- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

Class OTS_Player

[line 21]

OTServ character abstraction.

OTServ character abstraction.

- **Package** POT
- **Version** 0.0.1
- **Version** 0.0.2

Constructor *void* function OTS_Player::__construct(\$db) [line 52]

Function Parameters:

- [*IOTS_DB*](#) **\$db** Database connection object.

Sets database connection handler.

Sets database connection handler.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::find(\$name) [*line 84*]

Function Parameters:

- *string* **\$name** Player's name.

Loads player by it's name.

Loads player by it's name.

- **Version** 0.0.1
- **Since** 0.0.2
- **Access** public

OTS_Account function OTS_Player::getAccount() [*line 182*]

Returns account of this player.

Returns account of this player.

- **Version** 0.0.1
- **Access** public

int|bool function OTS_Player::getCap() [*line 784*]

Capacity.

Capacity.

- **Version** 0.0.1

- **Access** public

mixed|bool function OTS_Player::getConditions() [*line 894*]

Conditions.

Conditions.

- **Version** 0.0.1
- **Access** public

int|bool function OTS_Player::getDirection() [*line 524*]

Looking direction.

Looking direction.

- **Version** 0.0.1
- **Access** public

int|bool function OTS_Player::getExperience() [*line 290*]

Experience points.

Experience points.

- **Version** 0.0.1
- **Access** public

OTS_Group function OTS_Player::getGroup() [*line 210*]

Returns group of this player.

Returns group of this player.

- **Version** 0.0.1
- **Access** public

string/bool function OTS_Player::getGuildNick() [*line 978*]

Guild nick.

Guild nick.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getHealth() [*line 368*]

Current HP.

Current HP.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getHealthMax() [*line 394*]

Maximum HP.

Maximum HP.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getId() [*line 140*]

Player ID.

Player ID.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getLastIP() [*line 836*]

Last login IP.

Last login IP.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getLastLogin() [*line 810*]

Last login timestamp.

Last login timestamp.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getLevel() [*line 316*]

Experience level.

Experience level.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getLookAddons() [*line 680*]

Addons.

Addons.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getLookBody() [*line 550*]

Body color.

Body color.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getLookFeet() [*line 576*]

Boots color.

Boots color.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getLookHead() [*line 602*]

Hair color.

Hair color.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getLookLegs() [*line 628*]

Legs color.

Legs color.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getLookType() [*line 654*]

Outfit.

Outfit.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getLossExperience() [*line 1054*]

Percentage of experience lost after dead.

Percentage of experience lost after dead.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getLossMana() [*line 1079*]

Percentage of used mana lost after dead.

Percentage of used mana lost after dead.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getLossSkills() [*line 1104*]

Percentage of skills lost after dead.

Percentage of skills lost after dead.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getMagLevel() [*line 342*]

Magic level.

Magic level.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getMana() [*line 420*]

Current mana.

Current mana.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getManaMax() [*line 446*]

Maximum mana.

Maximum mana.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getManaSpent() [*line 472*]

Mana spent.

Mana spent.

- **Version** 0.0.1
- **Access** public

string/bool function OTS_Player::getName() [*line 156*]

Player name.

Player name.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getPosX() [*line 706*]

X map coordinate.

X map coordinate.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getPosY() [*line 732*]

Y map coordinate.

Y map coordinate.

- **Version** 0.0.1
- **Access** public

int/bool function OTS_Player::getPosZ() [*line 758*]

Z map coordinate.

Z map coordinate.

- **Version** 0.0.1
- **Access** public

int|bool function OTS_Player::getRankId() [*line 1004*]

Guild rank ID.

Guild rank ID.

- **Version** 0.0.1
- **Access** public

int|bool function OTS_Player::getRedSkullTime() [*line 920*]

Red skulled time remained.

Red skulled time remained.

- **Version** 0.0.1
- **Access** public

int|bool function OTS_Player::getSex() [*line 238*]

Player gender.

Player gender.

- **Version** 0.0.1
- **Access** public

int function OTS_Player::getSkill(\$skill) [*line 1133*]

Function Parameters:

- *int* **\$skill** Skill ID.

Returns player's skill.

Returns player's skill.

- **Version** 0.0.2
- **Version** 0.0.1
- **Since** 0.0.2
- **Access** public

int function OTS_Player::getSkillTries(\$skill) [*line 1165*]

Function Parameters:

- *int* **\$skill** Skill ID.

Returns player's skill's tries for next level.

Returns player's skill's tries for next level.

- **Version** 0.0.2
- **Version** 0.0.1
- **Since** 0.0.2
- **Access** public

int|bool function OTS_Player::getSoul() [*line 498*]

Soul points.

Soul points.

- **Version** 0.0.1
- **Access** public

int|bool function OTS_Player::getTownId() [*line 1029*]

Residence town's ID.

Residence town's ID.

- **Version** 0.0.1
- **Access** public

int|bool function OTS_Player::getVocation() [*line 264*]

Player proffesion.

Player proffesion.

- **Version** 0.0.1
- **Access** public

bool|null function OTS_Player::hasRedSkull() [*line 946*]

Checks if player has red skull.

Checks if player has red skull.

- **Version** 0.0.1
- **Access** public

bool function OTS_Player::isLoaded() [*line 101*]

Checks if object is loaded.

Checks if object is loaded.

- **Version** 0.0.1
- **Access** public

bool|null function OTS_Player::isSaveSet() [*line 862*]

Checks if save flag is set.

Checks if save flag is set.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::load(\$id) [*line 63*]

Function Parameters:

- *int* **\$id** Player's ID.

Loads player with given id.

Loads player with given id.

- **Version** 0.0.2
- **Version** 0.0.1
- **Access** public

void function OTS_Player::save() [line 111]

Saves account in database.

Saves account in database.

- **Version** 0.0.2
- **Version** 0.0.1
- **Access** public

void function OTS_Player::setAccount(\$account) [line 200]

Function Parameters:

- [OTS_Account](#) **\$account** Owning account.

Assigns character to account.

Assigns character to account.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setCap(\$cap) [line 800]

Function Parameters:

- *int* **\$cap** Capacity.

Sets capacity.

Sets capacity.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setConditions(\$conditions) [*line 910*]

Function Parameters:

- *mixed* **\$conditions** Condition binary field.

Sets conditions.

Sets conditions.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setDirection(\$direction) [*line 540*]

Function Parameters:

- *int* **\$direction** Looking direction.

Sets looking direction.

Sets looking direction.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setExperience(\$experience) [line 306]

Function Parameters:

- *int* **\$experience** Experience points.

Sets experience points.

Sets experience points.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setGroup(\$group) [line 228]

Function Parameters:

- [*OTS_Group*](#) **\$group** Group to be a member.

Assigns character to group.

Assigns character to group.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setGuildNick(\$guildnick) [line 994]

Function Parameters:

- *string* **\$guildnick** Name.

Sets guild nick.

Sets guild nick.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setHealth(\$health) [line 384]

Function Parameters:

- *int* **\$health** Current HP.

Sets current HP.

Sets current HP.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setHealthMax(\$healthmax) [line 410]

Function Parameters:

- *int* **\$healthmax** Maximum HP.

Sets maximum HP.

Sets maximum HP.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setLastIP(\$lastip) [line 852]

Function Parameters:

- *int* **\$lastip** Last login IP.

Sets last login IP.

Sets last login IP.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setLastLogin(\$lastlogin) [line 826]

Function Parameters:

- *int* **\$lastlogin** Last login timestamp.

Sets last login timestamp.

Sets last login timestamp.

- **Version** 0.0.1

- **Access** public

void function OTS_Player::setLevel(\$level) [line 332]

Function Parameters:

- *int* **\$level** Experience level.

Sets experience level.

Sets experience level.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setLookAddons(\$lookaddons) [line 696]

Function Parameters:

- *int* **\$lookaddons** Addons.

Sets addons.

Sets addons.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setLookBody(\$lookbody) [line 566]

Function Parameters:

- *int* **\$lookbody** Body color.

Sets body color.

Sets body color.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setLookFeet(\$lookfeet) [*line 592*]

Function Parameters:

- *int* **\$lookfeet** Boots color.

Sets boots color.

Sets boots color.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setLookHead(\$lookhead) [*line 618*]

Function Parameters:

- *int* **\$lookhead** Hair color.

Sets hair color.

Sets hair color.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setLookLegs(\$looklegs) [line 644]

Function Parameters:

- *int* **\$looklegs** Legs color.

Sets legs color.

Sets legs color.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setLookType(\$looktype) [line 670]

Function Parameters:

- *int* **\$looktype** Outfit.

Sets outfit.

Sets outfit.

- **Version** 0.0.1
- **Access** public

`void function OTS_Player::setLossExperience($loss_experience) [line 1070]`

Function Parameters:

- **`int $loss_experience`** Percentage of experience lost after dead.

Sets percentage of experience lost after dead.

Sets percentage of experience lost after dead.

- **Version** 0.0.1
- **Access** public

`void function OTS_Player::setLossMana($loss_mana) [line 1095]`

Function Parameters:

- **`int $loss_mana`** Percentage of used mana lost after dead.

Sets percentage of used mana lost after dead.

Sets percentage of used mana lost after dead.

- **Version** 0.0.1
- **Access** public

`void function OTS_Player::setLossSkills($loss_skills) [line 1120]`

Function Parameters:

- **`int $loss_skills`** Percentage of skills lost after dead.

Sets percentage of skills lost after dead.
Sets percentage of skills lost after dead.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setMagLevel(\$maglevel) [line 358]
Function Parameters:

- *int* **\$maglevel** Magic level.

Sets magic level.
Sets magic level.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setMana(\$mana) [line 436]
Function Parameters:

- *int* **\$mana** Current mana.

Sets current mana.
Sets current mana.

- **Version** 0.0.1

- **Access** public

void function OTS_Player::setManaMax(\$manamax) [line 462]

Function Parameters:

- *int* **\$manamax** Maximum mana.

Sets maximum mana.

Sets maximum mana.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setManaSpent(\$manaspent) [line 488]

Function Parameters:

- *int* **\$manaspent** Mana spent.

Sets mana spent.

Sets mana spent.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setName(\$name) [line 172]

Function Parameters:

- *string* **\$name** Name.

Sets players's name.

Sets players's name.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setPosX(\$posx) [*line 722*]

Function Parameters:

- *int* **\$posx** X map coordinate.

Sets X map coordinate.

Sets X map coordinate.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setPosY(\$posy) [*line 748*]

Function Parameters:

- *int* **\$posy** Y map coordinate.

Sets Y map coordinate.

Sets Y map coordinate.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setPosZ(\$posz) [line 774]

Function Parameters:

- *int* **\$posz** Z map coordinate.

Sets Z map coordinate.

Sets Z map coordinate.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setRankId(\$rank_id) [line 1020]

Function Parameters:

- *int* **\$rank_id** Guild rank ID.

Sets guild rank ID.

Sets guild rank ID.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setRedSkull() [line 968]

Sets red skull flag.

Sets red skull flag.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setRedSkullTime(\$redskulltime) [line 936]

Function Parameters:

- *int* **\$redskulltime** Red skulled time remained.

Sets red skulled time remained.

Sets red skulled time remained.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setSave() [line 884]

Sets save flag.

Sets save flag.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setSex(\$sex) [line 254]

Function Parameters:

- *int* **\$sex** Player gender.

Sets player gender.

Sets player gender.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setSkill(\$skill, \$value) [line 1152]

Function Parameters:

- *int* **\$skill** Skill ID.
- *int* **\$value** Skill value.

Sets skill value.

Sets skill value.

- **Version** 0.0.2
- **Version** 0.0.1
- **Since** 0.0.2
- **Access** public

void function OTS_Player::setSkillTries(\$skill, \$tries) [line 1184]

Function Parameters:

- *int* **\$skill** Skill ID.
- *int* **\$tries** Skill tries.

Sets skill's tries for next level.

Sets skill's tries for next level.

- **Version** 0.0.2
- **Version** 0.0.1
- **Since** 0.0.2
- **Access** public

void function OTS_Player::setSoul(\$soul) [*line 514*]

Function Parameters:

- *int* **\$soul** Soul points.

Sets soul points.

Sets soul points.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setTownId(\$town_id) [*line 1045*]

Function Parameters:

- *int* **\$town_id** Residence town's ID.

Sets residence town's ID.

Sets residence town's ID.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::setVocation(\$vocation) [line 280]

Function Parameters:

- *int* **\$vocation** Player proffesion.

Sets player proffesion.

Sets player proffesion.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::unsetRedSkull() [line 960]

Unsets red skull flag.

Unsets red skull flag.

- **Version** 0.0.1
- **Access** public

void function OTS_Player::unsetSave() [*line 876*]

Unsets save flag.

Unsets save flag.

- **Version** 0.0.1
- **Access** public

Class OTS_Players_List

[*line 19*]

List of players.

List of players.

- **Package** POT
- **Version** 0.0.1

Constructor *void function* OTS_Players_List::__construct(\$db) [*line 54*]

Function Parameters:

- [*IOTS_DB*](#) **\$db** Database connection object.

Sets database connection handler.

Sets database connection handler.

- **Version** 0.0.1
- **Access** public

int function OTS_Players_List::count() [*line 166*]

Returns number of characters on list in current criterium.

Returns number of characters on list in current criterium.

- **Version** 0.0.1
- **Access** public

OTS_Player function OTS_Players_List::current() [*line 116*]

Returns current row.

Returns current row.

- **Version** 0.0.1
- **Access** public

bool function OTS_Players_List::deletePlayer(\$player) [*line 99*]

Function Parameters:

- [*OTS_Player*](#) **\$player** Player to be deleted.

Deletes player.

Deletes player.

- **Version** 0.0.1
- **Access** public

mixed function OTS_Players_List::key() [*line 138*]

Current cursor position.

Current cursor position.

- **Version** 0.0.1
- **Access** public

void function OTS_Players_List::next() [*line 128*]

Moves to next row.

Moves to next row.

- **Version** 0.0.1
- **Access** public

void function OTS_Players_List::rewind() [*line 156*]

Select players from database.

Select players from database.

- **Version** 0.0.1
- **Access** public

void function OTS_Players_List::setLimit([\$limit = false]) [line 64]

Function Parameters:

- *int|bool* **\$limit** Limit for SELECT (false to reset).

Sets LIMIT.

Sets LIMIT.

- **Version** 0.0.1
- **Access** public

void function OTS_Players_List::setOffset([\$offset = false]) [line 81]

Function Parameters:

- *int|bool* **\$offset** Offset for SELECT (false to reset).

Sets OFFSET.

Sets OFFSET.

- **Version** 0.0.1
- **Access** public

bool function OTS_Players_List::valid() [line 148]

Checks if there are any rows left.

Checks if there are any rows left.

- **Version** 0.0.1
- **Access** public

29 ?>

```

Function Parameters:

- *int|null* **\$driver** Database driver type.
- *array* **\$params** Connection info.

Connects to database.

Connects to database.

Creates OTServ database connection object.

First parameter is one of database driver constants values. Currently MySQL and SQLite drivers are supported. XML is not planned.

This parameter can be null, then you have to specify '*driver*' parameter.

Such way is comfortable to store entire database configuration in one array and possibly runtime evaluation and/or configuration file saving.

For parameters list see driver documentation. Common parameters for all drivers are:

- *driver* - optional, specifies driver, applies when *\$driver* method parameter is *null*
- *prefix* - optional, prefix for database tables, use if you have more then one OTServ installed on one database.

- **Version** 0.0.1
- **Throws** Exception When driver is not supported.
- **Access** public
- **Example**

LOTS_DAO function POT::createObject(\$class) [*line 288*]

Function Parameters:

- *string* **\$class** Class name.

Creates OTServ DAO class instance.

Creates OTServ DAO class instance.

- **Version** 0.0.1
- **Access** public

POT function POT::getInstance() [*line 136*]

Singleton.

Singleton.

- **Version** 0.0.1
- **Static**
- **Access** public

void function POT::loadClass(\$class) [*line 205*]

Function Parameters:

- *string* **\$class** Class name.

Loads POT class file.

Loads POT class file.

Runtime class loading on demand - usefull for __autoload() function.

Note: Since 0.0.2 version this function is suitable for spl_autoload_register().

- **Version** 0.0.2
- **Version** 0.0.1
- **Access** public
- **Example** example not found

example

```

1  <?php
2
3  /**

9   */
10
11 // to not repeat all that stuff
12 include('quickstart.php');
13
14 // server and port
15 $server = '127.0.0.1';
16 $port = 7171;
17
18 // queries server of status info
19 $status = $ots-> serverStatus($server, $port);
20
21 // offline
22 if(!$status)
23 {
24     echo 'Server ', $server, ' is offline.', "\n" ;
25 }
26 // displays various info
27 else
28 {
29     echo 'Server name: ', $status-> getName(), "\n" ;
30     echo 'Server owner: ', $status-> getOwner(), "\n" ;
31     echo 'Players online: ', $status-> getOnlinePlayers(), "\n" ;
32     echo 'Maximum allowed number of players: ', $status-> getMaxPlayers(), "\n" ;
33     echo 'Required client version: ', $status-> getClientVersion(), "\n" ;
34     echo 'All monsters: ', $status-> getMonstersCount(), "\n" ;
35     echo 'Server message: ', $status-> getMOTD(), "\n" ;
36 }
37
38 ?>

```

Function Parameters:

- *string* **\$server** Server IP/domain.
- *int* **\$port** OTServ port.

Queries server status.

Queries server status.

Sends 'info' packet to OTS server and return output.

- **Version** 0.0.1
- **Version** 0.0.2
- **Since** 0.0.2
- **Access** public

- **Example**

`void function POT::setPOTPath($path)` [line 167]

fakeroot.php

```

1  <?php
2
3  /**
4   * @ignore
5   * @package examples
6   * @author Wrzasq <wrzasq@gmail.com>
7   * @copyright 2007 (C) by Wrzasq
8   * @license http://www.gnu.org/licenses/lgpl-3.0.txt GNU Lesser General Public License, Version 3
9   */
10
11 // this is the way you should work with POT if you moved main OTS.php file outside POT's directory
12 include('path/to/OTS.php');
13
14 // dont use 'new POT()'!!!
15 $ots = POT::getInstance();
16 $ots-> setPOTPath('../classes/');
17
18 /*
19  here comes your stuff...
20 */
21
22 ?>

```

Function Parameters:

- **string \$path** POT files path.

Set POT directory.

Set POT directory.

Use this method if you keep your POT package in different directory then this file.

- **Version** 0.0.1
- **Access** public
- **Example**

compat.php

POT compatibility assurance package.

POT compatibility assurance package.

This package makes you sure that POT scripts won't cause FATAL errors on PHP older PHP 5.x versions. However remember that some PHP features won't be enabled with it. For example if you have PHP 5.0.x, this package will define Countable interface for you so PHP will know it, but it won't allow you to use count(\$countableObject) structure.

- **Package** POT
- **Sub-Package** compat
- **Author** Wrzasq < wrzasq@gmail.com>
- **Version** 0.0.2

Appendix B - README/CHANGELOG/INSTALL

INSTALL

POT is a toolkit which means you don't literally install it. You copy it's files and write code for it. All source files are located in classes/ subdirectory. Copy them to your script directory.

You can put main file - OTS.php in different directory then other files.

For information about how to include POT in your code see the documentation.

CHANGELOG

[0.0.2]

- * Added "compat" library for POT. <wrzasq>
- * Added skills support in OTS_Player class. <wrzasq>
- * Added 'info' serverStatus() method and respond handler for server status protocol. <wrzasq>
- * Fixed `redskulltime` field name in OTS_Player. <wrzasq>
- * Fixed 'password' parameter for DB_MYSQL driver. <wrzasq>
- * Added find() to OTS_Account class to load accounts by their's e-mail addresses. <wrzasq>
- * POT class now automaticly binds own __autoload() handler with spl_autoload_register(). <wrzasq>

[0.0.1]

- * Initial release. <wrzasq>

NEWS

What's new in 0.0.2 version?

- * Added skills support.

You have now getSkill()/setSkill() methods in OTS_Player class.

- * Added 'info' request handling.

You have now POT::serverStatus() method which queries server for it's status. It returns special object (which is DOMDocument instance) with methods for easy data retrieval. Remember that this method operates on sockets I/O so connection problems will results in warning messages. You will probably want to silence it with @ operator.

- * Added find() to OTS_Account.

This method load account by it's e-mail address. You can now check if given e-mail address has already been used.

- * No more need for __autoload().

POT class now automatically registers own `__autoload()` handler so it will load all it's clases silently. Just include OTS.php file and use POT freely.

* Compatibility library.

For people who use PHP verion from before 5.1.2. Compatibility assurance library ("compat") is in separated compat.php file. You have to include it BEFORE OTS.php inclusion in otder to prevent POT from causing FATAL errors on PHP earlier then 5.1.2.

* Fixed password parameter problem with DB_MYSQL driver.

It was impossible to log into database with password as it was assigning parameter name to it. Fixed.

* Fixed `redskulltime` filed in OTS_Player.

Simple typo. Fixed.

README

POT (PHP OTServ Toolkit) is a PHP toolkit for scripts that work with OTServ database.

===== About =====

This toolkit provides a way for PHP programmers that don't know SQL langauge to work with OTServ database.

For installation help check INSTALL file.

For usage tutorial/API documentation check <http://www.otserv-aac.info/pot/> or documentation.pdf file.

===== Contact =====

In case of any contact needed, please use following e-mail address: wrzasq@gmail.com.

===== Files =====

classes/ - POT class files.

examples/ - example files for learning.

tutorials/ - phpDocumentor directory.

BUGS - known bugs.

CHANGELOG - changes history.

INSTALL - installation tutorial.

LICENSE - POT license (GNU LGPL v3), if you don't accept it - don't use any of those scripts.

NEWS - changes in current release.

README - this readme file.

RULES - rules to be followed during developing contributed code.

TODO - list of things to be done.

Makefile - make input, for documentation generation.

documentation.pdf - phpDocumentor-generator documentation in PDF format.
test.php - phpUnit test suite.

===== Makefile =====

Makefile contains some targets for make that can help in development. Makefile requires following command-line commands:

php: PHP CLI interface.
phpdoc: phpDocumentor.
phpunit: PHPUnit testing framework.

Possible targets:

all: default one, runs all other targets (in order: clean, check, documentation, pdf, online, test, package).
clean: deletes documentation.
check: checks syntax of all PHP files.
documentation: generates HTML documentation.
pdf: generates PDF documentation.
online: OTServ-AAC website documentation template used.
test: runs test suite.
package: creates pot.zip file for distribution purposes.

For more readable output of phpUnit test run:
php test.php

===== Credits =====

* Wrzasq <wrzasq@gmail.com> - project initiator, main developer.
